### Description

Injected integral foam sculptural shell barstool with steel base. Fall in love with the sculptural appeal of the Tonon Up Chair Fixed Stool Integral Solid Coloured Foam Metal. This contoured shell barstool with steel base offers a sophisticated accent for classic and contemporary bar areas. Specially developed for an unsurpassed level of comfort, each shell bar seat embraces an organic shape formed using an innovative foam plastic shell manufacturing process. Developed in Italy using the 'Freeform Advanced' production technique, the colour injected integral foam seat creates an exterior to plastic yet with a foam-like bounce. The barstool is then elevated in style by a strong steel base with footrest struts and rubber stoppers to protect your flooring below. Please note: This barstool can be produced in a choice of 12 colourways and is also available in a choice of matt and lacquered steel base finishes or contrast wooden leg options. If you are interested in any other configurations, please contact our customer service team for more information and a pricing quotation. Shown with white seat and white lacquered steel base.
