Description

Batch-dyed technopolymer thermoplastic dining chair designed by Piero Lissoni with Carlo Tamborini.

The Lizz Chair from Kartell is an airy chair that showcases minimalist design while exuding elegant designer style.

It is created from a solitary piece of thermoplastic utilising gas-blowing technology.

The chair takes its name from renowned actress, Elizabeth Taylor, and has a square contour seat surface and low, wide backrest.

It has been designed purposely for using at the table while it is also shock, scratch and weatherproof.
