Description

Contemporary plastic shell barstool with oak legs.
Transform kitchen and bar areas with the Normann Copenhagen Form
Barstool 65cm Oak.

Created by Simon Legald, the purpose of Form was to redesign the
traditional shell barstool with a more unified design.

Normann Copenhagen have developed new technology to join the seat
seamlessly with the legs.

The colourful curved plastic seat is naturally integrated to the oak base
using an innovative cup system.

The warm oak base and plastic seat join together elegantly, exuding the
quality craftsmanship that Normann Copenhagen are renowned for.

This contemporary design is then concluded with the addition of a
new-design steel strut footrest adding strength, durability and comfort to
the base.

An enduring icon of true Scandic style, combine with accenting items from
the Normann Copenhagen collection to create unity in your design
scheme.

Please note: This is a 65cm barstool. The collection can also be made in
a 75cm configuration - sold separately here.
