Description

Humanscale mesh task chair with automatic lumbar support.

The Humanscale Diffrient World Office Chair is an innovative lesson in user-friendly ergonomics.

Humanscale's first foray into all-mesh task seating, Diffrient World adapts effortlessly to the sitter's body profile with no manual adjustments required.

A major innovation in ergonomic task office chair design, this contemporary office chair was designed by iconic American industrial designer Niels Diffrient.

The intuitive design leverages two parts of the chair's frame and uses the laws of physics and the user's body weight to provide automatic balanced support throughout the full range of recline.

Then, a tri-panel backrest hugs the body to provide tailor-made lumbar support as the lightweight mesh seat eliminates contact stress under the thighs.

A global standard in ergonomic workplace design, this Humanscale designer task office chair creates the ultimate user-friendly seating experience.

Features:

Size adjustable to fit more than 95% of the population

Non-stretch, tri-panel mesh back and seat

Upholstered polyurethane foam seat cushion

- Automatically sculpts to match body contours
- Cradles the body in flexible, breathable mesh
- Injection-moulded external frame
